- 4 Toward a mp-MRI CAD for CaP
- 5 Experiments
- 6 Conclusions

## 1 Introduction

Motivations

The prostate organ

Prostate carcinoma

Screening

CAD and mp-MRI

Research objectives

## 2 State-of-the-art

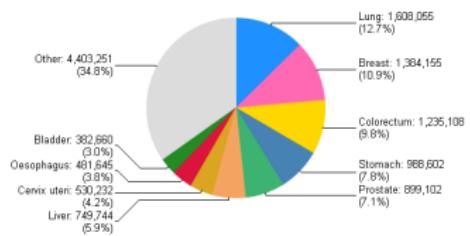

## 3 I2CVB

## 4 Toward a mp-MRI CAD for CaP

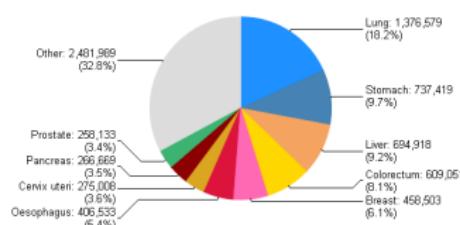

## 5 Experiments

## 6 Conclusions

## Statistics

(a) # of cancer cases

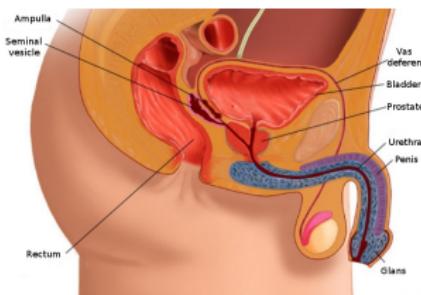

(b) # of cancer deaths

### Implications, image source<sup>1</sup>

- ▶ 2<sup>nd</sup> most frequently diagnosed men cancer
  - ▶ Accounting for 7.1% of overall cancers diagnosed
  - ▶ Accounting for 3.4% of overall cancers death

<sup>1</sup>J. Ferlay et al. "Estimates of worldwide burden of cancer in 2008: GLOBOCAN 2008". In: *Int. J. Cancer* 127.12 (Dec. 2010), pp. 2893–2917.

Anatomy

Localization of the prostate organ, image source<sup>2</sup>

## Characteristics

- ▶ Height: 3 cm
  - ▶ Depth: 2.5 cm
  - ▶ Weight: 7 g to 16 g

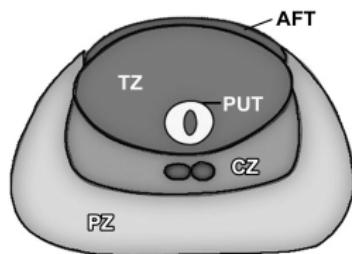

<sup>2</sup>Geckomedia. *Natom Anatomy*. French. June 2011. url: <http://www.natomshop.com/>.

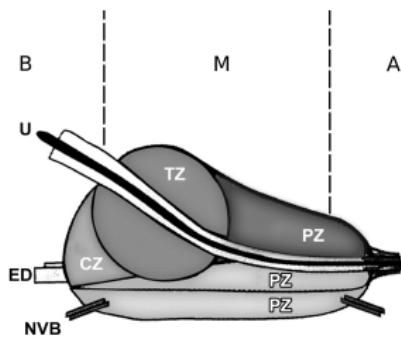

## The prostate organ

Anatomy

(a) Transverse plane

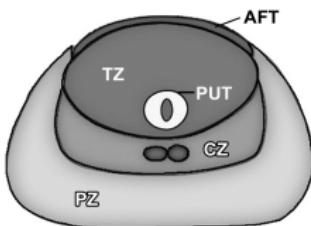

(b) Sagittal plane

Prostate zones - AFT: anterior fibromuscular tissue, CZ: central zone, ED: ejaculatory duct, NVB: neurovascular bundle, PUT: periurethral tissue, PZ: peripheral zone, U: urethra, TZ: transitional zone, B: base, M: median, A: apex; image source<sup>3</sup>

<sup>3</sup>Y. J. Choi et al. "Functional MR imaging of prostate cancer". In: *Radiographics* 27 (2007), pp. 63–75.

## Prostate carcinoma (CaP)

## CaP development

- ▶ Slow-growing → 85 %
  - ▶ Fast-growing → 15 %
  - ▶ CaPs in CG are more aggressive

## Zonal predisposition

- ▶ PZ → 70 % to 80 %
  - ▶ TZ → 10 % to 20 %
  - ▶ CG → 5 %

## Goals

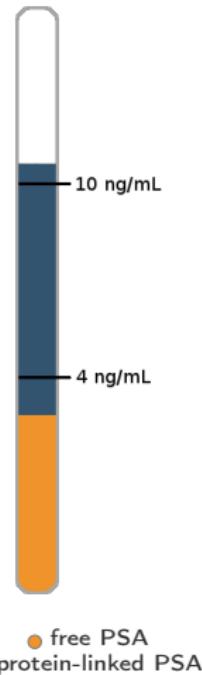

- ▶ Detect CaP
  - ▶ Distinguish slow- from fast-growing CaP
  - ▶ Active surveillance vs. prostatectomy/other treatments

## Prostate-specific antigen

- ▶  $> 10 \text{ ng mL}^{-1} \rightarrow \text{biopsy}$
- ▶ From  $4 \text{ ng mL}^{-1}$  to  $10 \text{ ng mL}^{-1}$   
 $\rightarrow \frac{\bullet}{\bullet + \bullet} > 15\% \rightarrow \text{biopsy}$
- ✗ Not reliable

## "Blind" transrectal ultrasound biopsy

- ▶ Take samples from different locations
- ▶ Grade using Gleason score
- ✗ Invasive procedure
- ✗ Lead to false positives & negatives

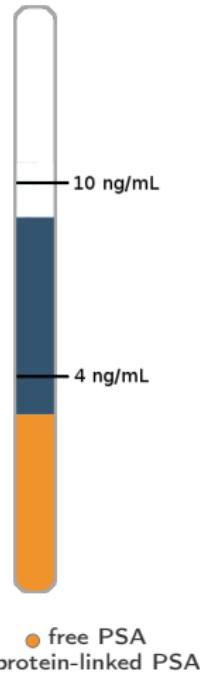

## Prostate-specific antigen

- ▶  $> 10 \text{ ng mL}^{-1} \rightarrow \text{biopsy}$
- ▶ From  $4 \text{ ng mL}^{-1}$  to  $10 \text{ ng mL}^{-1}$   
 $\rightarrow \frac{\bullet}{\bullet + \bullet} > 15\% \rightarrow \text{biopsy}$

✗ Not reliable

## "Blind" transrectal ultrasound biopsy

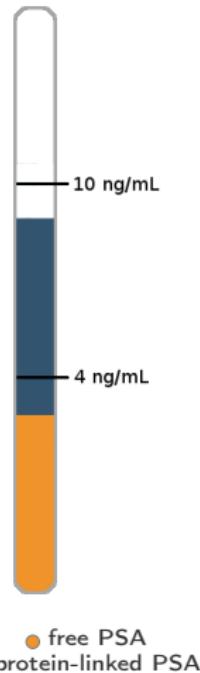

- ▶ Take samples from different locations
- ▶ Grade using Gleason score
- ✗ Invasive procedure
- ✗ Lead to false positives & negatives

## Prostate-specific antigen

- ▶  $> 10 \text{ ng mL}^{-1} \rightarrow \text{biopsy}$
  - ▶ From  $4 \text{ ng mL}^{-1}$  to  $10 \text{ ng mL}^{-1}$   
 $\rightarrow \frac{\text{orange}}{\text{orange} + \text{blue}} > 15\% \rightarrow \text{biopsy}$
  - ✗ Not reliable

### “Blind” transrectal ultrasound biopsy

## Prostate-specific antigen

- ▶  $> 10 \text{ ng mL}^{-1} \rightarrow \text{biopsy}$
  - ▶ From  $4 \text{ ng mL}^{-1}$  to  $10 \text{ ng mL}^{-1}$   
 $\rightarrow \frac{\text{orange}}{\text{orange} + \text{blue}} > 15\% \rightarrow \text{biopsy}$
  - ✗ Not reliable

## “Blind” transrectal ultrasound biopsy

- ▶ Take samples from different locations
  - ▶ Grade using Gleason score

✗ Invasive procedure

✗ Lead to false positives & negatives

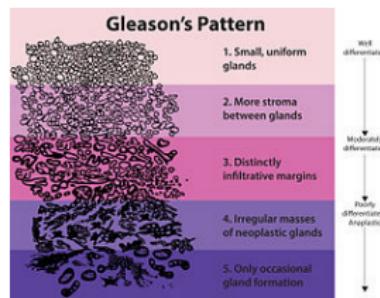

Image source: <https://goo.gl/fEVQXQ>

## Prostate-specific antigen

- ▶  $> 10 \text{ ng mL}^{-1} \rightarrow \text{biopsy}$
  - ▶ From  $4 \text{ ng mL}^{-1}$  to  $10 \text{ ng mL}^{-1}$   
 $\rightarrow \frac{\text{orange}}{\text{orange} + \text{blue}} > 15\% \rightarrow \text{biopsy}$
  - ✗ Not reliable

## “Blind” transrectal ultrasound biopsy

- ▶ Take samples from different locations
  - ▶ Grade using Gleason score
  - ✗ Invasive procedure
  - ✗ Lead to false positives & negatives

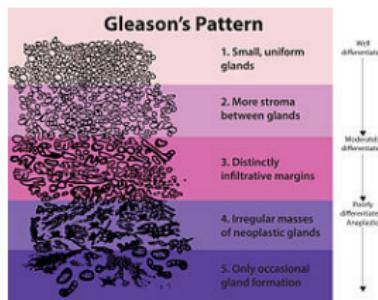

Image source: <https://goo.gl/fEVQXQ>

## Screening

## Prostate-specific antigen

- ▶  $> 10 \text{ ng mL}^{-1} \rightarrow \text{biopsy}$
  - ▶ From  $4 \text{ ng mL}^{-1}$  to  $10 \text{ ng mL}^{-1}$   
 $\rightarrow \frac{\text{orange}}{\text{orange} + \text{blue}} > 15\% \rightarrow \text{biopsy}$
  - ✗ Not reliable

## “Blind” transrectal ultrasound biopsy

- ▶ Take samples from different locations
  - ▶ Grade using Gleason score
  - ✗ Invasive procedure
  - ✗ Lead to false positives & negatives

## Pros

- ✓ Reduce CaP-related mortality from 21 % to 44 %<sup>4</sup>

Cons

- ✗ Up to 30 % of over-diagnosis<sup>5</sup>
  - ✗ Up to 35 % of undiagnosed CaP<sup>6</sup>
  - ✗ Biopsies are invasive

<sup>4</sup>Fritz H. Schröder et al. "Prostate-cancer mortality at 11 years of follow-up". In: *New England Journal of Medicine* 366.11 (2012), pp. 981–990.

<sup>5</sup> G. P. Haas et al. "Needle biopsies on autopsy prostates: sensitivity of cancer detection based on true prevalence". In: *J. Natl. Cancer Inst.* 99.19 (Oct. 2007), pp. 1484-1489.

<sup>6</sup>A. V. Taira et al. "Performance of transperineal template-guided mapping biopsy in detecting prostate cancer in the initial and repeat biopsy setting". In: *Prostate Cancer Prostatic Dis.* 13.1 (Mar. 2010), pp. 71–77.

# CAD and mp-MRI

## Current trendy techniques: mp-MRI

- ✓ Less invasive technique

## Human diagnosis using mp-MRI

- ✗ Need further investigation of the mp-MRI modalities
- ✗ Low repeatability
  - ▶ Observer limitations
  - ▶ Complexity of clinical cases

## Emergence of CAD

- ▶ CADe → detection of potential lesions
- ▶ CADx → diagnosis regarding those lesions

## Research objectives

### Propose a mp-MRI CAD for CaP

- ▶ Study and investigate the state-of-the-art on MRI CAD for CaP
- ▶ Identify the scientific barriers
- ▶ Design a mp-MRI CAD addressing these issues
- ▶ Investigate and analyze the proposed CAD

① Introduction

② State-of-the-art

MRI modalities  
CAD for CaP

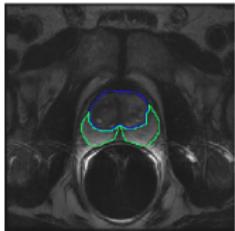

③ I2CVB

④ Toward a mp-MRI CAD for CaP

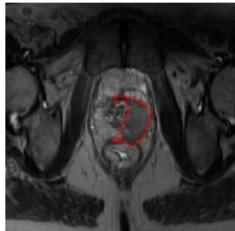

⑤ Experiments

⑥ Conclusions

## T<sub>2</sub>W-MRI

(a) Healthy

(b) CaP PZ

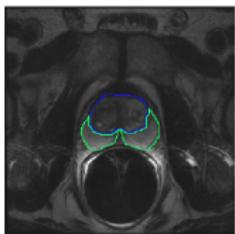

(c) CaP CG

### Healthy

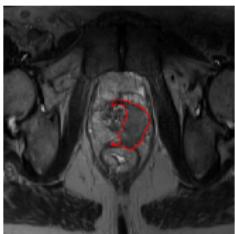

- ▶ Intermediate to high-signal intensity (SI) in PZ
- ▶ Low-SI in CG

### CaP

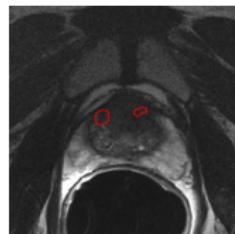

- ▶ Low-SI
- ▶ Round and ill-defined mass in PZ
- ▶ Homogeneous with ill-defined edges in CG

T<sub>2</sub>W-MRI

(d) Healthy

(e) CaP PZ

(f) CaP CG

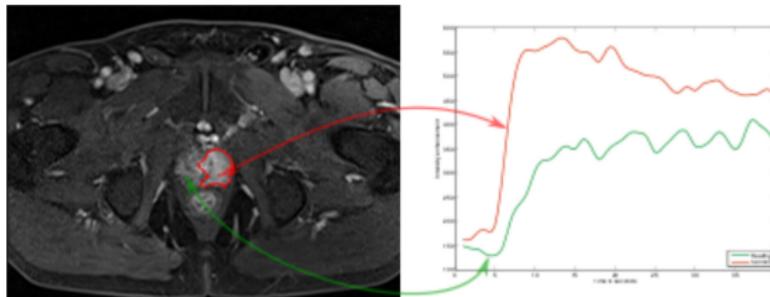

## Pros

- ▶ Highest spatial resolution
- ▶ Anatomy nicely depicted

## Cons

- ▶ Low sensitivity in CG
- ▶ Lower specificity due to outliers

## DCE-MRI

Green: healthy - Red: CaP

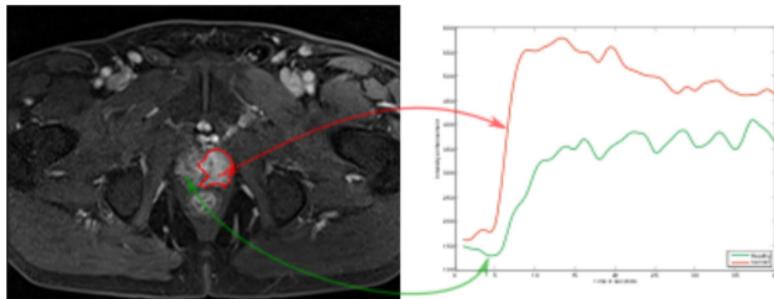

## Healthy

- ▶ Slower wash-in, wash-out, time-to-peak enhancement
- ▶ Lower integral under the curve, max SI

## CaP

- ▶ Faster wash-in, wash-out, time-to-peak enhancement
- ▶ Higher integral under the curve, max SI

## DCE-MRI

Green: healthy - Red: CaP

## Pros

- ▶ Information about vascularity

## Cons

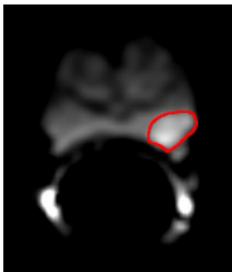

- ▶ Spatial mis-registration
- ▶ Lower spatial resolution than T<sub>2</sub>W-MRI
- ▶ Difficult detection in CG

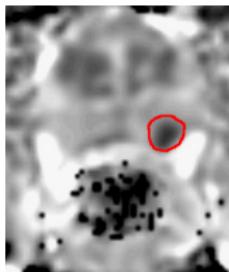

# MRI modalities

## DW-MRI - ADC

(a) DW MRI

(b) ADC

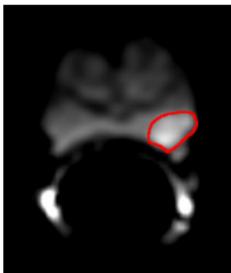

### Healthy

- ▶ DW-MRI: lower SI
- ▶ ADC: higher-SI

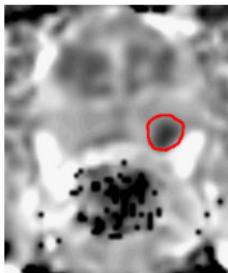

### CaP

- ▶ DW-MRI: higher SI
- ▶ ADC: lower-SI

## DW-MRI - ADC

(c) DW MRI

(d) ADC

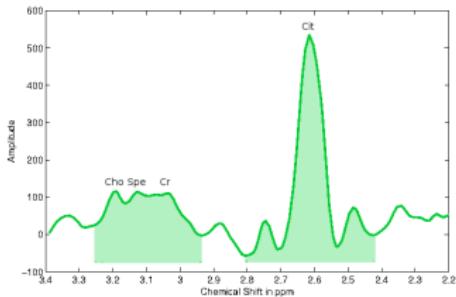

## Pros

- ▶ Information about tissue structure
- ▶ ADC correlated with Gleason score

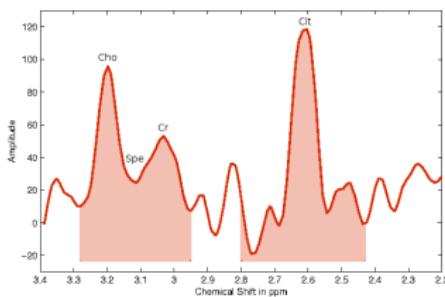

## Cons

- ▶ Poor spatial resolution
- ▶ Variability of the ADC coefficient

## MRSI

(a) Healthy

(b) CaP

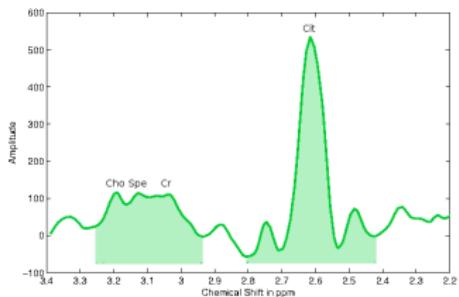

## Healthy

- ▶ High citrate
- ▶ Moderate choline and spermine

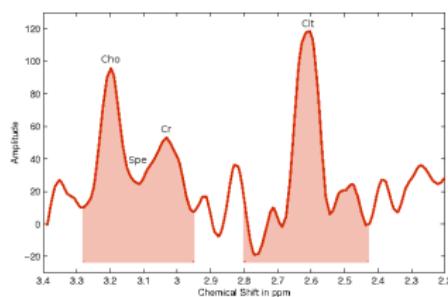

## CaP

- ▶ Decrease of citrate and spermine
- ▶ Increase of choline

MRSI

(c) Healthy

(d) CaP

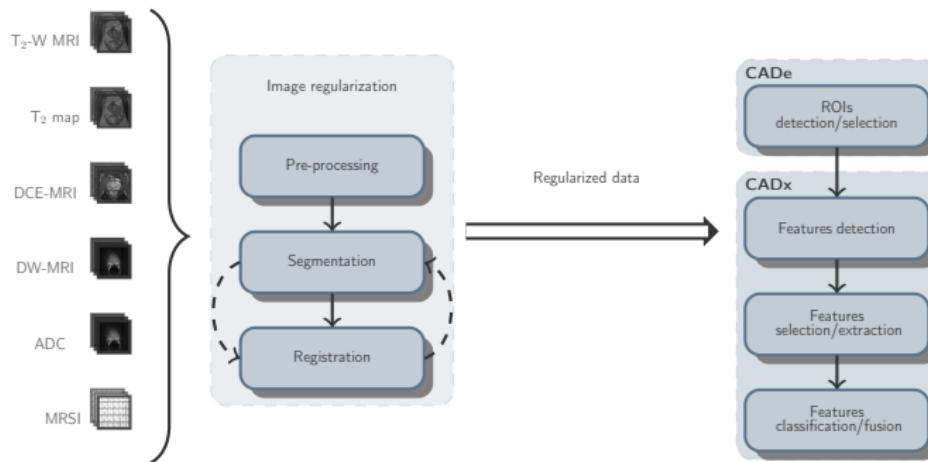

## Pros

- Citrate correlated with Gleason score

Cons

- ▶ Low spatial resolution
  - ▶ Variation inter-patients

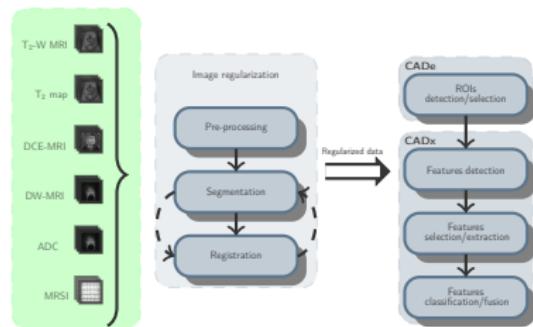

## Full CAD for detection and diagnosis of CaP

Common CAD framework based on MRI images used to detect CaP

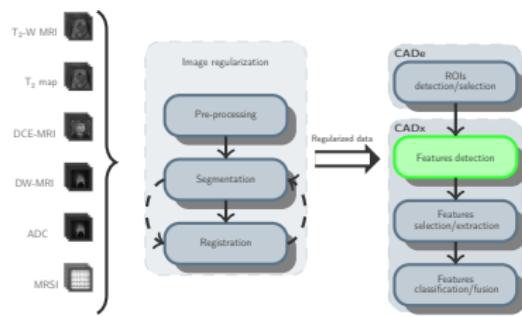

## Conclusions

- ✓ 3 modalities better than 2
- ✓ Texture and edge features are predominant
- ✓ Features selection/extraction tends to improve performance
- ✓ Pre-eminence of SVM and ensemble classifier (i.e., AdaBoost, RF, etc.)

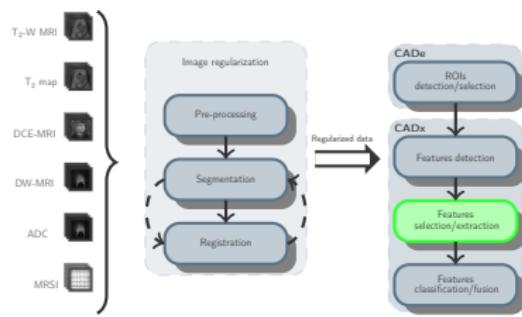

## Conclusions

- ✓ 3 modalities better than 2
- ✓ Texture and edge features are predominant
- ✓ Features selection/extraction tends to improve performance
- ✓ Pre-eminence of SVM and ensemble classifier (i.e., AdaBoost, RF, etc.)

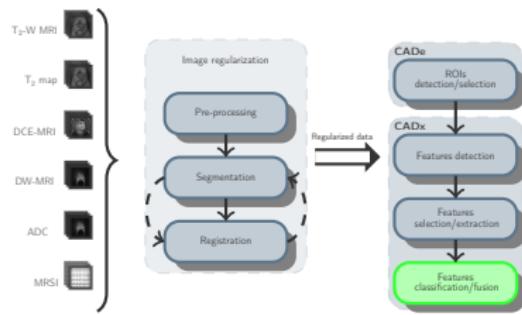

## Conclusions

- ✓ 3 modalities better than 2
- ✓ Texture and edge features are predominant

- ✓ Pre-eminence of SVM and ensemble classifier (i.e., AdaBoost, RF, etc.)

## Conclusions

- ✓ 3 modalities better than 2
- ✓ Texture and edge features are predominant
- ✓ Features selection/extraction tends to improve performance
- ✓ Pre-eminence of SVM and ensemble classifier (i.e., AdaBoost, RF, etc.)

# CAD for CaP

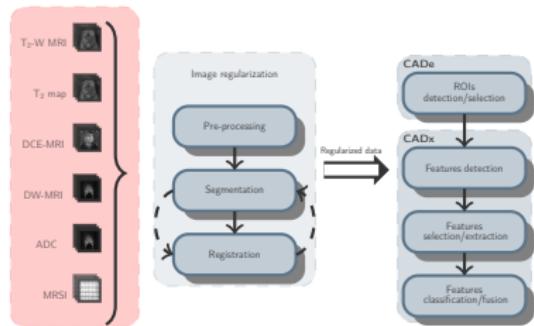

## Conclusions

- ✓ 3 modalities better than 2
- ✓ Texture and edge features are predominant
- ✓ Features selection/extraction tends to improve performance
- ✓ Pre-eminence of SVM and ensemble classifier (i.e., AdaBoost, RF, etc.)

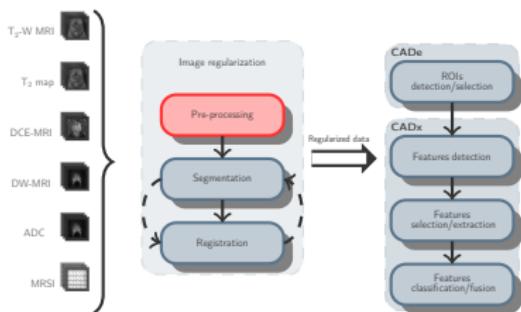

## Scientific and technical challenges

- ✗ No publicly available mp-MRI dataset
- ✗ Only 1 study used 4 MRI modalities
- ✗ Limited work on data normalization
- ✗ A lot of features are extracted in 2D
- ✗ Limited work regarding selection/extraction
- ✗ No work regarding data balancing
- ✗ No source code available of any CAD

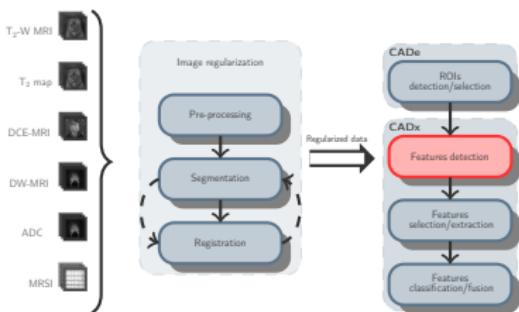

## Scientific and technical challenges

- ✗ No publicly available mp-MRI dataset
- ✗ Only 1 study used 4 MRI modalities

- ✗ Limited work regarding selection/extraction
- ✗ No work regarding data balancing
- ✗ No source code available of any CAD

## Research objectives

- ▶ Collect a mp-MRI dataset
- ▶ Design a CAD for CaP using all mp-MRI modalities
- ▶ Investigate normalization, feature selection/extraction, data balancing
- ▶ Implement 3D features
- ▶ Release source code and dataset

<sup>9</sup>S. Ozer et al. "Supervised and unsupervised methods for prostate cancer segmentation with multispectral MRI". In: *Med Phys* 37.4 (Apr. 2010), pp. 1873–1883.

## Inter-patients intensity variations

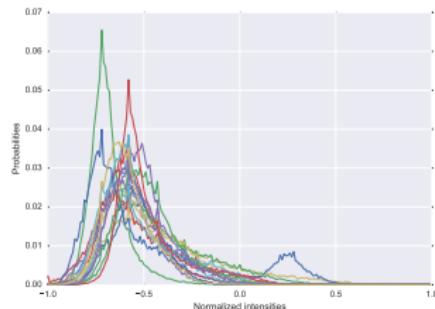

- ▶ Artan et al.<sup>8</sup> and Ozer et al.<sup>9</sup> normalized data based on the *z-score*.
- ▶ Lv et al.<sup>10</sup> and Viswanath et al.<sup>11</sup> used methods based on piecewise-linear normalization<sup>12</sup>.

<sup>10</sup>D. Lv et al. "Computerized characterization of prostate cancer by fractal analysis in MR images". In: *J Magn Reson Imaging* 30.1 (July 2009), pp. 161–168.

<sup>11</sup>S. E. Viswanath et al. "Central gland and peripheral zone prostate tumors have significantly different quantitative imaging signatures on 3 Tesla endorectal, *in vivo* T2-weighted MR imagery". In: *J Magn Reson Imaging* 36.1 (July 2012), pp. 213–224.

<sup>12</sup>L. G. Nyul et al. "New variants of a method of MRI scale standardization". In: *IEEE Trans Med Imaging* 19.2 (Feb. 2000), pp. 143–150.

## Inter-patients intensity variations

- ▶ Artan et al.<sup>8</sup> and Ozer et al.<sup>9</sup> normalized data based on the *z-score*.
- ▶ Lv et al.<sup>10</sup> and Viswanath et al.<sup>11</sup> used methods based on piecewise-linear normalization<sup>12</sup>.

## Contributions<sup>13</sup>

- (i) a *model-based* approach using Rician *a priori*;
- (ii) a *non-parametric based* approach based on the SRSF representation.

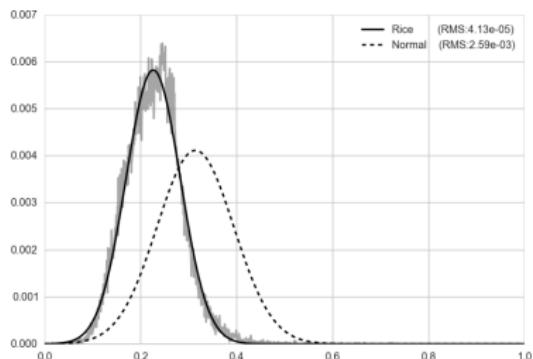

<sup>13</sup> Guillaume Lemaître et al. "Normalization of T2W-MRI Prostate Images using Rician a priori". In: SPIE Medical Imaging. International Society for Optics and Photonics. 2016, pp. 978529–978529.

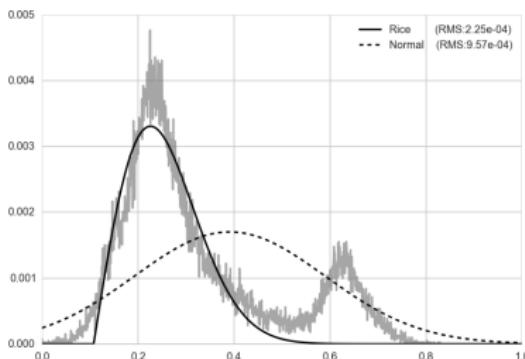

## T<sub>2</sub>W-MRI normalization

## Gaussian vs. Rician

(a)

(b)

## Example of fitted functions

# T<sub>2</sub>W-MRI normalization

## Gaussian normalization

$$I_s(x) = \frac{I_r(x) - \mu_G}{\sigma_G} . \quad (1)$$

## Rician normalization

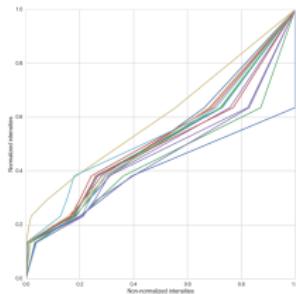

$$I_s(x) = \frac{I_r(x) - \mu_R}{\sigma_R} , \quad (2)$$

$$\mu_R = \sigma \sqrt{\frac{\pi}{2}} L_{1/2}\left(-\frac{\nu^2}{2\sigma^2}\right) , \quad (3)$$

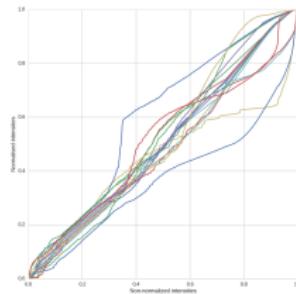

$$\sigma_R = \sqrt{2\sigma^2 + \nu^2 - \frac{\pi\sigma^2}{2} L_{1/2}^2\left(\frac{-\nu^2}{2\sigma^2}\right)} . \quad (4)$$

# T<sub>2</sub>W-MRI normalization

## Comparison of warping function

(a) Piecewise-linear warping

(b) SRSF warping

### Piecewise-linear normalization

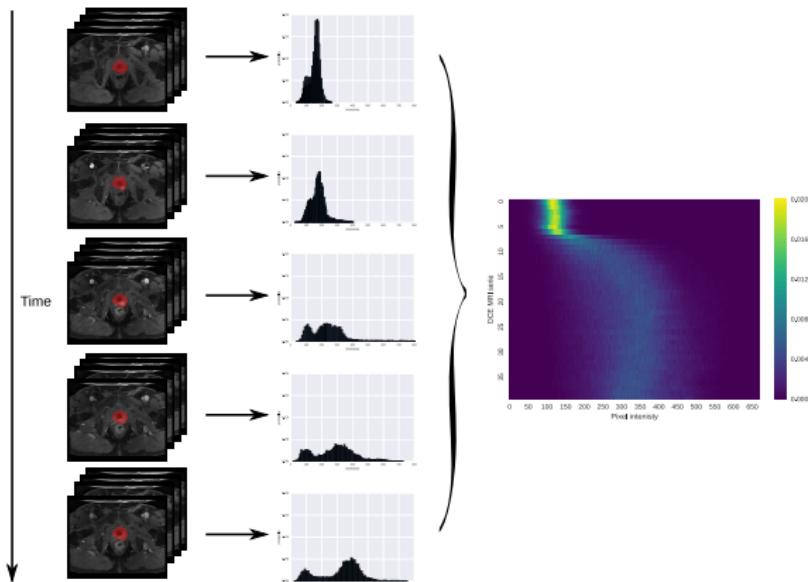

Minimize the distance between some standardized landmarks  $\mu_i$  and some non-normalized landmarks  $\lambda_i$

### SRSF-based normalization

Minimize the distance between a mean PDF  $\mu_f$  (i.e., the Karcher mean) and a given patient PDF  $f_i$

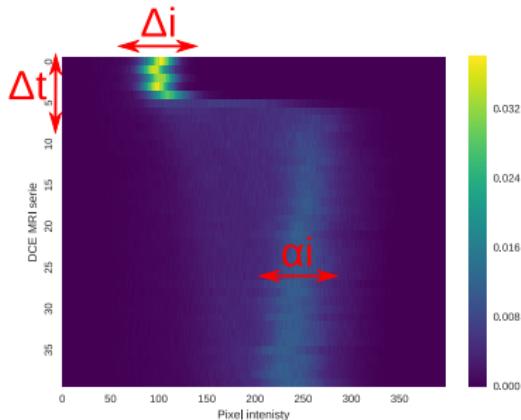

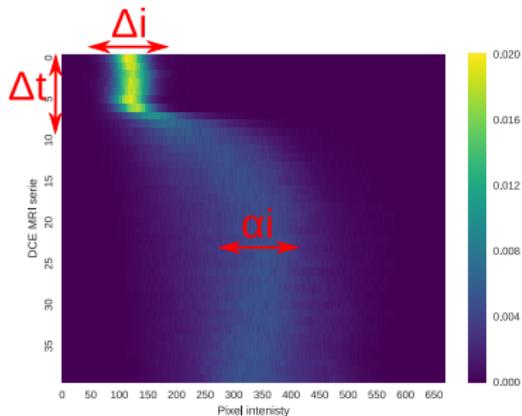

# DCE-MRI normalization

## Heatmap representation<sup>14</sup>

<sup>14</sup> Guillaume Lemaître et al. "Automatic prostate cancer detection through DCE-MRI images: all you need is a good normalization". In: *Medical Image Analysis - Submitted (2017)*.

## Inter-patients variations

(a)

(b)

Variations driven with  $\Delta_i$ ,  $\Delta_t$ , and  $\sigma_i$
